OBSERVATION OF TRAINS FOR DEFECTS

Dragging Equipment Detector

1076-A2. At Landis when Interlocking Station is not in service and Letter E is illuminated, trains will report promptly to Block Station in the rear that their train has actuated Dragging Equipment Detector. After complying with Rule 4076-A, a member of the crew will advise Block Station in rear.

MOVEMENT OF TRAINS

1083-A1. Rule S-83: Except on portions of the railroad where Rule 261 is in effect, the information as to the arrival or departure of superior trains will be furnished on form CT 1246 or by message, by the operator at initial stations, junctions or where trains pass from one of two or more tracks to single track or by train orders if furnished to trains before arrival at the points mentioned.

Train Ready Indicators—30th St. Station, Philadelphia—Upper Level

1084-A1. When passenger trains enroute to Suburban Station are ready to leave, conductor will push button on post adjacent to track on which train is standing, unless interlocking signal is displayed for train to proceed. Receipt of signal by Broad will be indicated by light near pushbutton. If light is not received, conductor will call Broad on telephone located on platform. After train has started, train director at Broad will extinguish light.

Train Ready Indicators—30th St. Station, Philadelphia—Lower Level

1084-A2. Train Ready Indicators located overhead, applying to trains on each track, made up of two (2) lights—Green and Yellow, and push buttons at convenient locations marked conductor, flagman, Penn and cancel.

When train is ready to proceed insofar as each individual member of train crew and station force is concerned, they will be governed as follows:

When travel has descended from main concourse to platform at about fifteen (15) seconds before time of departure, when possible, the station attendant will press key in receptacle in stairhead in concourse, illuminating amber light on platform columns above button locations.

Upon receipt of station attendant's amber light and travel has boarded in his vicinity, flagman will press button marked flagman, illuminating yellow light on indicator. Conductor, or other member of his crew at his direction, will press button marked conductor, illuminating green light on indicator.

The conductor will observe indicator and when the green and yellow lights are illuminated and the amber light above the button locations is illuminated, will tap to Penn and give proper communicating signal to proceed.

On westward platform, train ready indicators located overhead for each track consisting of one green light and one yellow light with push buttons at convenient locations marked conductor, flagman and cancel. Flagman will press button marked flagman when travel in his vicinity has boarded train, which will illuminate yellow light on indicators. Conductor (or other member of his crew at his direction) will press button marked conductor which will illuminate green light on indicator and light panel on operator's table in Block Station. Conductor will observe indicator and when both lights are showing, will give proper signal to start train. After train has departed, station attendant will press button marked cancel which will extinguish lights on indicator.

At Suburban Station, 30th Street Station, Philadelphia, North Philadelphia Station or Harrisburg Station—by the Station Master or his representative.

At Penn Coach Yard or Paoli Yard—by the Yard Master or his representative.

Non-Interlocked Railroad Crossings At Grade

1098-A1. Movement of trains or engines on tracks of this Region over non-interlocked railroad crossings at grade will be governed as follows:

Location	Signals, Etc., Governing Movements Over Crossings		Requirements	Note
	Type	Indication or Position		
P.R.R.-B.&O.R.R.: Delaware Ave. and Vandalia St.	P.R.R. Position Light B&O Color Light	Proceed 10 miles per hour	All switches are hand operated.	1-4
P.R.R.-Reading Co.: 60th St. Track	Semaphore	Proceed	Signals and derails must be operated by trainmen.	2-4
P.R.R.-Red Arrow R.R.: West Chester Pike at Llanerch, Pa.	Stop Sign	Stop		3-4
P.R.R.-Reading Co.: East of Downs, New Holland Track	Stop Sign	Stop		3-5
P.R.R.-Cornwall R.R.: Lebanon	Semaphore	Stop		6

NOTE:

1. Movements will pass fixed signal in Stop indication after first stopping and providing flag protection against B & O Railroad movement.
2. Normal position of signals and derails: Reading Co. signals at stop and derails open; P. R. R. signals at proceed and derails closed.

If from failure of apparatus signal cannot be changed from its most restrictive indication and no conflicting movement of either railroad is in sight, conductor or engineman will, after protecting crossing, ascertain that derails are in proper position for movement, pass signal in stop position and report to Superintendent Transportation from first point of communication where the report can be made without serious delay.

3. Each railroad movement will approach this crossing at grade prepared to stop and before moving over this crossing a member of train crew equipped with a red flag by day and a red light by night must precede each movement.
4. Cars must not be left standing within confines of crossing.
5. PRR movements must stop at Stop sign governing their movement and provide flag protection against Reading Company movements before proceeding over crossing.

Reading Company movements will stop at Stop sign governing their movement (255 feet on either side of crossing) then proceed over crossing if crossing is clear.

In the event PRR and Reading Company movements arrive at Stop signs governing their particular movements at approximately the same time, the Reading Company will have prior right to the crossing.

6. Movements over the crossing must be protected by train or engine crews except when watchman is on duty. Signals normally clear for Cornwall R.R. Co. movements.

Movable Bridge—Not Part of an Interlocking

1098-B1. To authorize an engine with or without cars to pass a stop signal governing movements over Grays Ferry movable bridge, the following instructions will apply:

1. The bridge tender must personally examine or have knowledge from an authorized maintainer or M W representative that the movable bridge is in place, with rails lining up properly, locked and safe for the movement and that smash boards are secured in vertical position.
2. This information must then be given to the yard master or his representative who will, in writing, authorize the engine to proceed as though restricting signal were displayed.

Calling Flagman, Paoli, Overbrook and Phoenixville

1099-A1. At Overbrook, engineman or conductor of eastward trains will call the flagman with push-button located in telephone box at eastward home signal bridge or on signal relay case 1,300 feet eastward from Overbrook interlocking station, operating call bells approximately 800 feet apart between Merion and Narberth.

1099-A2. At Paoli, engineman or conductor of eastward trains will call the flagman with push button located in telephone box at eastward home signal bridge, operating call bells approximately 800 feet apart, between Mile Posts 20 and 21.

Standard code will be used.

The engine whistle must not be used for calling flagman of eastward trains unless push-button is out of order.

1099-A3. At Phoenixville, westward trains when stopped will not use engine whistle to recall flagman.

An electric horn is located at east end of Phoenixville Bridge to be operated from a switch located on east side of telephone box at westward home signal.

Referring to First Paragraph Rule 103

1103-A1. When multiple unit cars are being pushed or backed between Suburban Station, 30th St. Station, Philadelphia and the passenger car yards, or mail house, a back-up hose must be used and engineman notified.

At Paoli in the movement of MU equipment where the back-up hose is not used, the requirements of Rule 30 of the 99-D-1 will have been complied with when the conductor is stationed in the vestibule of the leading car, in the direction of the movement, and in view of a member of his crew who must be in a position within the car to operate the conductors valve if necessary.

Small light located at push-button will be illuminated when flashing light signals are operating.

(3) Trains must stop before fouling grade crossing and operate push-button inside small box designated PB, located on side of instrument case. Push-button will operate flashing light signals and must be pressed until small light at push-button is illuminated, or until entire train has passed over the crossing.

NOTE 1.—Engines or trains shifting west of crossings, or moving eastward after making a movement over the crossing, must approach them not exceeding 5 miles per hour.

Before switching movements are made to or from freight house or old yard tracks, push buttons located in small box on pedestal adjacent to switch leading to freight house must be operated to insure full protection to highway traffic, Norwegian Street, Pottsville.

NOTE 4.—To avoid unnecessary operation of automatic highway crossing protection signals at Union Ave., Lansdowne, by movements of southward trains from No. 2 track to the Newtown Square track, such trains must stop and not pass fixed signal B55, located 355 feet south of Fernwood passenger station, until switch is lined for movement to Newtown Square track.

NOTE 5.—Automatic highway crossing gates and flasher lights will operate when a train or engine is approximately 100 feet north of north end of Swarthmore Station platform, but will cease to operate 1 minute and 50 seconds after train stops between latter point and "CC" sign. If such movement stops, it must be assured that proper protection is provided before movement is continued over crossing.

Northward passenger trains on No. 1 track must platform first MU car or engine.

NOTE 6.—Attention is directed to 9th paragraph, Rule 4103-B.

NOTE 7.—Flashing light signals are equipped with cut-out circuit in No. 1 track, extending 500 feet west of Petersburg Road crossing which will permit flashing light signals to discontinue operating after front portion of train on this track has passed over crossing to perform shifting movements. When shifting movements are completed, trainmen must protect crossing and know highway traffic is under control before movement is made over crossing.

NOTE 8.—To avoid unnecessary operation, cars must not be permitted to stand on either side of crossing between insulated joints approximately 70 feet north of crossing and 70 feet south thereof, while making shifting movements.

NOTE 9.—Highway crossing signals discontinue operating at Pitt Street after northward trains have stopped, and at West Street after southward trains have stopped at Station on main track.

Northward and southward trains, after having stopped at Carlisle Station on main track, must approach Pitt Street and West Street prepared to stop, and not move over these crossings at grade until after highway crossing signals start operating to protect highway traffic.

NOTE 10.—Highway flasher lights will operate when approaching train or engine is within 1,760 feet of the crossing. If the movement consumes over one minute and thirty seconds between that point and the CC sign, the flasher lights will cease operating. When the movement passes the CC sign, the flasher lights will again operate to protect highway traffic.

Such movements must approach crossing prepared to stop and assure themselves the crossing lights are flashing before passing over the crossing.

NOTE 11.—See instructions posted in telephone box.

1103-A7. In the event automatic highway crossing signals are not operating, before making movements over crossings specified below, a member of crew must be stationed on crossing and provide protection to pedestrian and vehicular traffic.

NOTE A.—In addition, before movement is made, or when a train is standing on this crossing between sunset and sunrise, a burning fusee must be placed on crossing, on both sides of train. After train clears crossing fusees must be extinguished and removed from crossing.

NOTE B.—Broad and Washington Avenue Highway Crossing, Standard Highway Traffic Signals in service.

When a movement is to be made across Broad Street, the following will govern:

All movements must stop clear of sidewalks.

Movement must not be made across Broad Street when traffic lights for Broad Street indicate green or proceed.

Before making movement across Broad Street, conductor, engineman, or his representative, must go to signal control box on traffic light post, located at southwest corner of South Broad Street and Washington Avenue, open door of small iron box, secured by standard switch lock, and push button marked "To Cross Street" which will cause the traffic signals to display Green for traffic on Washington Avenue. Switch key must then be placed in slot marked PRR, turn key clockwise and hold pressure on key in that position. This will hold traffic signal Green until pressure is released on the switch key after which traffic signal will resume normal operation. A member of crew must precede such movement to warn the public of approaching engine or cars. Movement may then proceed across Broad Street.

Sixteenth Street at Washington Avenue must not be blocked longer than two minutes while cars of the Philadelphia Transportation Company are waiting, except in case of a moving train.

NOTE C.—Traffic lights governing movement of highway traffic, in service. Rail movements before obstructing highway traffic will be governed as follows:

Stop before obstructing crossing. Crossing must not be obstructed while traffic lights indicate Green for highway traffic to proceed. Conductor, engineman, or his representative must operate switch located in control box on either side of crossing which will cause the traffic lights to indicate Red for highway traffic. In addition, a member of the crew must precede each rail movement over the crossing to warn public of approaching rail movement. When rail movement is clear of the crossing, the conductor, engineman, or his representative must operate switch in either control box to release traffic lights and permit their automatic operation. Control of the traffic lights may be taken or restored to their normal operation from either control box, or can be taken from one control box and restored from the other, at each of these separate grade crossings. Control boxes must be kept locked at all times, except when in use, to insure safety of operation and to prevent vandalism.

NOTE D.—A member of the train crew, equipped with a red flag during daylight hours and with a red lantern and a white lantern during the hours of darkness, precede each and every movement of each engine, car or train across the crossing at grade, and properly warn the traveling public of the approach of such engine, car or train.

NOTE E.—Prior to and during the passage of trains over Charlestown Road Crossing, Devault Running Track, Wilmer, Pa., a member of the crew equipped with a red flag during daylight hours, and with a red and a white lantern during hours of darkness, must be stationed on each side of the crossing to provide protection to traffic.

Automatic Highway Crossing Protection

1155-A1. Except between Lemo and Winchester, the following instructions, supplementary to the Brake and Train Air Signal Instruction No. 99-D-1 in handling freight trains will apply:

Trains having 40 percent or less loaded cars will be considered empty trains.

Trains having 25 percent or more of the cars in train loaded with mineral freight or grain, are considered mineral freight trains and all instructions pertaining to mineral freight trains apply.

On all mineral freight trains, the retaining valves must be turned up in slow direct exhaust position (45 degrees above center) on 25 percent of the cars in train, commencing at head end of train regardless of the number of three-position retainers encountered. This must be done at the time the terminal air brake test is made.

Brake Pipe Pressure on mineral freight trains must be 95 pounds between all points.

When engineman is notified as to the condition of the brakes, he must also be notified as to the number of retaining valves set up in slow direct exhaust position.

When in the judgment of the engineman, the use of additional retaining valves is required, or their use is desired on grades other than specified, he will instruct the conductor.

When stopping freight trains on descending grades, approximately six or seven car lengths before the train would come to a normal stop, the independent brake must be substituted for the dynamic brake when used and when completing the stop, and must be fully applied in order to insure the bunching of the slack on the entire train.

Retaining valves will be used in slow direct release on the front end of eastward freight trains between Paoli and Valley, as follows:

Trains of empty cars—50 or more cars—10 percent.

All other trains—25 percent.

The short cycle method of braking will be used to control the train eastward from Bryn Mawr.

Referring to Instruction 2-a (page 10) Brake and Train Air Signal Instructions (99-D-1) after leaving Thorn engineman of freight trains routed via Paoli will increase brake pipe pressure to 95 pounds on eastward freight trains.

When engines are equipped with pressure maintaining feature, this method will be used to handle trains.

Starting Trains With Electric or Diesel Engines on Rear

When starting trains where an electric or diesel engine is on the rear, the hauling engineman in all cases must stretch the train gradually so no damage will occur due to electric or diesel engine on the rear standing without power applied.

When trains are stopped on grades, requiring the assistance of a pusher engine on the rear, the following procedure must be followed:

When train is ready to start, a 25-lb. brake pipe reduction will be made. After the brake pipe exhaust stops, release brakes as per current issue of the Brake and Train Air Signal Instructions. While brakes are releasing during a four (4) minute interval, sufficient slack will be taken gently, exercising care so that rear portion of train will not move back, resulting in a run-out of slack, as the electric or diesel pusher engine will have brake released and no power applied. Four (4) minutes after the brake valve was first placed in running position, power will be applied to start the train by the hauling engineman.

Four (4) minutes after observing the first increase of pressure on the brake pipe pointer, engineman of pusher engine will use power to push in slack on rear and start train.

Starting Freight Trains on Descending Grades

Before starting trains, enginemen must assure themselves that air brakes have been properly released in accordance with the current issue of the Brake and Train Air Signal Instructions, after which engineman will move engine approximately six (6) to eight (8) feet, apply the independent brake and stop, then move 6 to 8 feet further and continue to follow this procedure until the slack has run out on the entire train. It may be necessary to hold the independent brake slightly applied to overcome the final run-out of slack and until the entire train is moving.

Schuylkill Secondary Track—Newton to Pottsville

Special Instructions for controlling freight trains with power brakes on heavy descending grades—Instructions 54 to 60 of the 99-D-1, Brake and Train Air Signal Instructions will apply.

Brake pipe pressure to be increased to 100 pounds.

Eastward freight trains between Newton and Pottsville will be limited to 3500 gross tons.

Air Brake Tests Various Locations

A running test of the air brakes must be made before descending grades on the Minersville and Devault running tracks.

When moving loaded cars from Morea Colliery complete air brake and retaining valve tests must be made before such cars are moved from the colliery tracks.

Shifting Movements on Grades

On account of grade, when performing service at following locations, engine and cars must have air brake hose coupled and air brakes operative:

- (a) Allied Chemical Corp., Grays Ferry.
 - (b) Fels Company, Darby.
 - (c) Lachmen's Track, Phoenixville.
 - (d) Atlantic and Pacific Tea Company tracks, Fernwood.

Freight Train Stops

1155-A3. Nest—To prevent blocking of Gravers Road crossing (1855 feet east of westward Home signal) westward freight trains consisting of 35 cars or more will stop east of this crossing when westward Home signal governing the movement is in Stop indication and contact the operator for instructions.

1155-A4. LG-21 (A & S Branch)—When Block signal L-246 is in Stop-and-proceed indication eastward trains on No. 1 track must stop west of clearance point of switches at LG-21 and ask for instructions.

1155-A5. Shocks (Columbia Branch)—Account ascending grade, when eastward Home signal indicates Stop, eastward freight trains with 90 or more cars, or with 80% or more of its engine rating, will stop at telephone one-half mile west of this signal and contact operator Cola for instructions.

1155-A6. Billmyer (Columbia Branch)—To prevent blocking road crossing to J. E. Baker Company plant, westward trains using siding will stop east of this crossing (approximately 50 car lengths east of Jeb) and ask for instructions.

If signal at Jeb is in Stop indication westward trains using main track will stop east of this crossing and ask for instructions.

1155-A7. Harrisburg—When signal 1015 on No. 2 track, Columbia Branch, indicates approach or stop and proceed, westward freight trains consisting of more than 25 cars will stop at signal and ask for instructions from State before proceeding.

1155-A8. Day—Account ascending grade, when block signal N-831 indicates Approach or Stop-and-proceed, westward trains on this track with more than 45 cars will stop at signal and contact the operator for instructions.

Pusher Engines

1155-B1. When lunar white electric light is lighted on eastward side of Overbrook Interlocking Station, or on westward home signal bridge at Bryn Mawr, it will indicate to crews of westward trains with pusher engines that pusher will be detached to clear west end of that interlocking.

1155-B2. Pusher engines of freight trains over Bala grade must not detach from the train until the entire train is over the grade.

1155-B3. When pushing freight trains pusher engines will ease off passing over crossovers or turnouts when making diverging movements exercising care to avoid slack action.

1155-B4. Maximum power on rear of freight trains must not exceed 5000 diesel horsepower or 7800 electric horsepower. When diesel engine and electric engine are coupled and used together as pushers, the 7800 electric horsepower factor will apply but diesel horsepower must not exceed 2500.

Not more than one electric engine of any class may be used with a diesel engine for pushing freight trains.

Not more than two Class P-5 engines may be used coupled together as pusher engines. If two GG-1 engines are coupled together as pushers, at least one motor circuit must be cut out of one of the engines.

1155-B6. When ready to detach pusher while moving, trainman will close angle cock on rear of cabin car, pull cutting pin on cabin car coupler and separate air hoses between the cabin car and pusher. (Chains are provided on cabin car couplers and air hoses to permit safe uncouplings.) The air hose separation will result in an emergency application of the air brakes on the pusher.

Freight Crews Relieved—Instructions to

1155-C3. When freight road crews are relieved on the Phila. Region, short of their destination, the road conductor will turn over his wheel reports together with the tickets to the conductor, who will fill in the upper left hand column on the reverse side of the wheel report.

Movements Over Firing Range—Frankford Arsenal

1155-C4. Before entering Frankford Arsenal from Naught track, movements must stop and obtain permission from guard stationed at gate.

Movements must not be made over firing range while red flag at the range target is displayed or the red blinker lights are operating at range target or Proof House.

Trains—Blocking Station Platforms

1155-C5. Movements on No. 0 and No. 5 tracks between Holmes and North Philadelphia and No. 5 track at Darby must not block the platforms at stations so that passenger trains cannot discharge or receive passengers and must approach stations looking out for passengers.

Illuminated Sign—Use of—Overbrook

1155-C6. Electrically illuminated sign, located northwest corner of interlocking station, designating track number to which eastward freight trains are routed at Woodbine Avenue and track on which set-off is to be made in 53rd Street receiving yard.

When the letter E is displayed—set-off will be made on the eastward end of the track designated.

When the letter W is displayed—set-off will be made on the westward end of the track designated.

The letter L displayed—indicates Ladder track, etc.

Numbers on Catenary Poles—Use of—Villanova-Ardmore

1155-C7. Between Villanova and Ardmore: For the information of train and engine crews of eastward freight trains, numerals, indicating the number of car lengths including two engine lengths, have been stencilled on catenary poles to right of No. 1 track, to indicate when the rear of their train is over the apex of the grade at Villanova and Bryn Mawr as follows:

Eastward from Villanova

Passenger Station

50 cars—Pole 11.70

75 cars—Pole 11.52

100 cars—Pole 11.30

125 cars—Pole 11.01

Eastward from Bryn Mawr

Passenger Station

50 cars—Pole 9.40

75 cars—Pole 9.22

100 cars—Pole 9.05

125 cars—Pole 8.82

Doubling Train—Bala Grade

1155-C9. Eastward freight trains having tonnage that require doubling over Bala grade will leave the rear portion of their train at Manayunk, eastward from the passenger station, while moving the front portion to Cynwyd.

Shifting Movements Stadium

1155-C10. While shifting at Stadium, movements may be made beyond the Home signal on No. 1 track by permission of the operator and under flag protection. Before giving such permission, operator at Stadium must have Home signal levers governing eastward movement on No. 1 track at Penrose in their normal position, indicating Stop, these levers blocked with standard blocking devices and must know that the track between Penrose and Stadium is clear of other train movements. When permission has been given for such shifting movement, the operator at Stadium must know that the movement has been completed before admitting another movement to enter No. 1 track either at Penrose or between Penrose and Stadium.

Conductor of such switching movement will be responsible for securing permission, notifying engineman that they have permission, assuring themselves that proper flag protection is provided and of reporting clear to operator when movement is completed.

1155-C11. Stadium—West end coal yard ladders, (tracks 1 to 10, inc.). Switching movements must not foul ladders until permission is obtained from Operator Stadium to do so.

When switching is completed and ladders are clear, the conductor must report clear to Operator Stadium. Operator Stadium will not permit road movement to proceed on coal yard leads until all switching movements are reported clear.

FREIGHT AND PASSENGER TRAIN OPERATION

Attaching and Detaching Helper Engines

1156-A1. After attaching or detaching helper engines in passenger or freight train service, an application and release test of the train brakes must be made from the engine in charge of the train, provided a terminal test had been previously made from the hauling engine. Inspectors or trainmen will note that the rear brakes of the train apply and then signal for a release. Pushing engines may be detached from rear of train without making the brake test.

Road enginemen will be advised when and where a pusher engine is to be attached. After the pusher engine is attached, and the road test of the brakes has been made, the engineman of the pusher will start to push when given a signal by a trainman of the train to be assisted.

Referring to Rule 4156-A

1156-A2. Cars delivered to 52nd Street district must be secured by hand brakes placed on both eastward and westward ends of cut.

Harrisburg Passenger Station—On track 24, in addition to applying a sufficient number of hand brakes on cars left standing to make them secure, car wheels must be blocked. For this purpose a metal skate is available at this location and must be applied on running rail against car wheel. Before moving cars from this track, care must be taken to insure that the skate is removed from rail.

Forms—Preparation and Use of

1156-A3. Conductors and enginemen of trains will prepare Form MP-217a (for passenger equipment) and Form MP-401 (for freight equipment) in cases where defects are found or where repairs are made by train or engine crews. For any repairs made or material applied to Pullman, private or foreign passenger cars and foreign and individual freight cars, full information must be shown including place repairs are made, number of parts, whether new or second hand and reason for repairs.

In cases where repairs are not made at intermediate points, the Form MP-217a must be forwarded on the same train with defective car. The forms in the case of passenger equipment will be turned in at the end of the trip. The form in case of freight equipment must be turned over to the car inspector or yard master at end of trip.

Hot Journals

1156-A4. Equipment for sponging hot journals, with hose connection, located as follows:

Lancaster passenger station. Thorndale (old coaling station.)
Q on A & S branch.

Storage Tracks—Harrisburg

1156-A5. Harrisburg Passenger Station—Tracks 3, 6, 7, 24, 1-E, all tracks in Mulberry Street, State Street and Cumberland Valley Yards and all single end tracks are storage tracks.

Clearing Main Track—Chestnut Hill

1156-A6. When Chestnut Hill Block Station is not in service, eastward trains must report to operator at North Philadelphia immediately when clear of Main track.

Between Town, Hager and Vardo:

1156-A7. Movements between Town, Hager and Vardo (N. & W. R. R.) made on signal indication or on permission of operator, Hager, superseding time-table superiority.

After an understanding with the operator and under permissive signal, an engine may enter a block occupied by a passenger train, which it is to move, switch or assist.

Freight or cabin cars must not be run over the crossing at Town or Hager detached from engines or train.

Tubular Train—Diesel Power Car Operation in Tunnels or Confined Locations 30th St. Station, Philadelphia (Lower Level)

1156-A8. Load on diesel engines in power car must be reduced by placing heat control switch on lighting switchboard panel in one or more tubular coaches in "LOW HEAT" position.

Load must be so reduced before passing ZOO Interlocking Station—Southward and Eastward, and Arsenal Interlocking Station—Northward. Full heat cannot be obtained in any tubular coach unless heat control switches in all tubular coaches are in "FULL HEAT" position.

EXAMINATION OF PANTOGRAPHS

Passenger Service

1167-A10. During sleet storms pantographs of electric engines will be examined by maintenance forces on trains making schedule stops at:

NORTH PHILADELPHIA:

Enginemen will stop with engine opposite the inspection platforms located on top of the shelter sheds at the extreme end.

PAOLI:

Enginemen of westward passenger trains will stop with front end of engine at station stop marker Eng. Stop. With double-headed engines at marker D-1. Eastward trains stop with leading engine at station stop marker No. 14.

LANCASTER:

Enginemen will stop with engine at extreme departing end of platform.

30TH ST. STATION PHILA., (RIVER LINE):

Enginemen will stop front of leading engine at end of platform for northward trains, and not beyond station stop marker No. 15 for southward trains.

When requested by inspectors at the above points, enginemen will lower pantographs immediately to permit qualified employes to make the inspection. Enginemen must not raise pantographs until after the inspection has been made and so advised.

In all cases firemen must be prepared to place boiler in manual operation immediately when request to lower pantographs has been made.

Freight Service

Southward—Arsenal Interlocking station.

Trenton Branch—at Nest*

*Note—Eastward trains with tonnage which would cause difficulty starting or moving over grade Nest to Plymouth Meeting, will detach engine at Rambo and move lite to Nest for pantograph inspection.

Atglen and Susquehanna and Columbia Branches—

Westward—At water plug east of Cola.

Eastward—At water plug west of Cola.

Power Removal

1167-A11. When necessary to have the power removed for the purpose of going to the roof of multiple unit equipment or electric locomotives, the engineman must personally arrange to have the power removed and to have the power restored; unless a Class "A" employe is in charge.

Removal or Application of Control Jumpers

1167-A12. When necessary to remove or apply control jumpers between electric engines, all pantographs must be lowered. If not practicable, open generator switch, battery switch, and air compressor switch during time of insertion or removal of jumpers.

Blowers—Multiple Unit Equipment

1167-A13. On multiple unit trains departing from Suburban Station, car inspectors will close all blower motor switches four (4) minutes before scheduled departing time. As soon as practical after train has departed from Suburban station the train crew will make a check on all cars to determine if the blower is running, as a car operating without ventilating air will overheat the transformer and main motors and cause this equipment to fail. Car inspectors will open blower motor switches on all cars upon arrival of trains at Suburban station.

When cab signal test cannot be made with the blower stopped, the blower motor switch must be closed.

Multiple unit equipment moving deadhead to and from Powelton Avenue multiple unit yard and Suburban station must have all blower motor switches closed. Shifting crews must close blower motor switches on all multiple unit cars prior to making shifting movements in Suburban station or Powelton Avenue multiple unit yard.

Employees—High Equipment

1167-A14. Employees must not be on top of box cars, engine or other high equipment when movements are being made from sidings, yards or other tracks, which are not electrified, to tracks which are electrified, except in High Wire Territory.

Employees Working on or Near Energized Wires Permission—Proper Protection

1167-A15. Employees working on or near energized wires must obtain permission and proper protection from power director.

Conductors are responsible for knowing that trainmen; engine-men are responsible for knowing that firemen; foremen are responsible for knowing that their men understand and comply with instructions for electrical operation.

When inexperienced employees are required to work in electrified territory, experienced employees must call their attention to the danger.

Operation of (1) Multiple Unit Car

1167-A16. Operation of one (1) multiple unit car is prohibited except when shifting in yards or for movement between Suburban station and Mail Platform, 30th St. Station Phila., Powelton Avenue multiple unit yard and Pennsylvania coach yard. Before moving one (1) multiple unit car, the air brake and both hand brakes must be tested and known to be operative. The engineman operating the car and the trainman accompanying him, must be stationed one at each end of the car and both must be prepared to control it with the hand brake in the event of failure of the air brake. These movements must not exceed a speed of 10 miles per hour.

This instruction does not apply to MU cars which are equipped with a special emergency brake system to permit single car operation at maximum speeds for MU trains.

In the operation of MU cars equipped with special emergency brake system, an EMERGENCY BRAKE SWITCH is located in each motorman's operating compartment. The special emergency brake system is operated by placing the EMERGENCY BRAKE SWITCH, in the operating compartment from which the car is being operated, in the "ON" position. It is to be used only in event of failure of the regular air brake system. The switch must normally remain in the "OFF" position. When in single car operation, the special emergency brake system on these cars must be tested from operating end before each trip by placing the EMERGENCY BRAKE SWITCH in "ON" position with brakes released and control plug inserted, noting that brakes are immediately applied on both trucks. When switch is placed in "OFF" position brakes must release on both trucks. This test should immediately follow the normal initial terminal air brake test as prescribed in Instruction 11-b of 99-D-1, Brake and TrainAir Signal Instructions.

Operation of Steam Heat Boilers Under Catenary

1167-A17. At 30th St. Station, Phila., Upper Level, boiler may be operated in low flame position.

At 30th St. Station, Phila., Lower Level, when outside temperature is below 40 degrees, the boiler may be operated in low flame position. When outside temperature is above 40 degrees, the boiler must be shut down and the main valve closed while passing Zoo or Arsenal when approaching station. On departing trains the boiler must not be started until engine has cleared the overhead portion of the station.

At Suburban Station and U. S. Post Office facilities at 30th Street, steam heat boiler must be shut down.

1167-A18. At Harrisburg Passenger Station tracks No. 1 to 9, inclusive, fire in boiler must be regulated to avoid safety valves lifting.

Boilers must not be operated in high flame position between State Street and Mulberry Street overhead bridges.

Fire in boiler of arriving engines must not be extinguished until arrival on disposal track at enginehouse.

Operation of Steam Heat Generators Under Catenary

1167-A19. Steam heat generators may be operated under low wire.

At 30th St. Station, Phila., Lower Level, terminating trains equipped with steam generators must have the train-line steam valve closed before passing Zoo or Arsenal.

At Suburban Station and U. S. Post Office facilities at 30th Street, steam heat generators must be shut down.

Display of Heat Numerals

1167-A20. Heat numeral signs 0-1-2-3 will be displayed at:

Station Master's Office, Suburban station;
 Assistant Yard Master's Office, Suburban station;
 Powelton Avenue Multiple Unit yard;
 Chestnut Hill Passenger station;
 Assistant Yard Master's Office, Paoli;
 Ticket office, Media;
 Ticket office, West Chester;
 Outside second floor window, Norris interlocking station;
 Park interlocking station.

Employees at Haws Avenue must obtain information from operator at Norris as to which heat board is in effect.

The temperature of the first car in a multiple unit train averages several degrees warmer than the other cars due to the front door being kept closed; it is the duty of the train crews to reduce the amount of heat in this car whenever practical.

Heater Switches—Use of

1167-A21. Heater switches on all cars in multiple unit trains destined to Suburban Station must be opened not later than just after passing North Philadelphia, 52nd Street, 49th Street station or Brill interlocking station.

Position of Pantographs (Sleet Storms)

1167-A22. During sleet-forming weather, when multiple unit cars are lying in yards or terminals pantographs should be kept against the wires and heaters turned on in the car, so that the roof will be warm, with the blower motors shut down until the car is moved.

On short turn-around trains at outlying terminals, where no multiple unit car inspectors are on duty, the pantographs are not to be lowered during sleet storms when ice is forming on the pantograph for the purpose of making a pantograph test unless a drop order is in effect.

When practicable, multiple unit trains arriving at a terminal in making turn-around movements, the train shall be prepared as promptly as possible and pantographs lowered, unless special instructions prevent, or it is necessary to heat the train. The pantographs should not, under ordinary conditions, be raised more than 10 minutes before the train leaves.

Lowering and Raising Pantographs

1167-A23. At Suburban station—Car inspectors will confer with Broad interlocking station before lowering and before raising pantographs.

Sectionalizing switches operated from Broad interlocking station serve to individually de-energize catenary over each track in Suburban station. The proper sectionalizing switch must be opened before raising or before lowering pantographs in Suburban station. Trains must not be allowed to enter tracks when catenary is de-energized.

Grounding switch may be closed on cars standing on tracks in Suburban station, in accordance with the following:

First—The train director at Broad interlocking station must open the trolley switch on the proper track.

Second—The pantograph must be lowered on car in question if it has not already been lowered automatically or otherwise.

Third—The grounding switch must be closed and safety key inserted, the employee performing this operation must stand on the end ladder of car.

On account of close catenary clearance on tracks, employees must not go on roof of multiple unit cars to work unless catenary is de-energized and a proper ground applied.

At Harrisburg Station—Pantographs must not be dropped while on Station tracks No. 1 to No. 10, inclusive, nor at Lancaster Station while under passenger bridge, or under other close overhead structures, except in case of emergency, and then only after controller is in OFF position and control switches to blower motors, air compressors and heaters have been opened, or until it is known that trolley wire is de-energized.

Detour of Trains Hauled by Electric Engines

1167-A24. Trains hauled by electric engines, detoured via foreign lines or to tracks other than normal route, with steam or diesel engines coupled ahead, will keep their pantographs against the wire until just prior to leaving the electrified territory in order to assist the steam engine. Trains received from other regions or railroads in detour service, will immediately, upon reaching electrified territory, place their pantographs against the wire and assist in hauling of the trains, unless orders to the contrary are received.

Schuylkill Branch*

No. 1 track from Jeff to Valley.

Lebanon Track—

200 feet east of connection with Main Line (Conewago).

*NOTE—A member of the train crew of multiple unit trains must observe the indications of the cab signals on the opposite end from which the engineman is operating while making cab signal test on running test sections, and check with engineman immediately after the test.

Cab Signal Test

1551-A3. When making cab signal departure tests, except on MU equipment, the fireman or helper must operate the switch for the test circuit.

On MU equipment the conductor will operate the switch for the test circuit. Where test of cab signal is required on additional MU cars in a train, it is permissible to close the cab signal warning whistle (on other than the leading car) after the test has been made. On arrival at turning point of this equipment, both the conductor and engineman must personally know that the cab signal warning whistle cock is cut in on the operating end that had previously received cab signal test.

Control Plug—Requirements When Removed or Re-Set Is Necessary

1551-A5. When necessary for the engineman of multiple unit equipment to remove the control plug for the purpose of operating the re-set circuit or move the controller to the reverse position, the cab signal warning whistle must be permitted to sound until the control plug is again placed in its normal operating position.

Exceptions Authorized

1559-A1. On permission of the operator when authorized by the Superintendent Transportation MU trains may be dispatched from their Terminal with cab signal apparatus not in operative condition between:

6.00 A.M., and 9.00 A.M.,
3.30 P.M., and 6.00 P.M.,

if cab signal test cannot be completed because of failure of equipment or the leading car extends beyond testing section. Such trains may proceed at Authorized speed governed by fixed signal indication and must not pass Stop-and-proceed signal (**Rule 291**) or Restricting signal (**Rule 290**) except when governed by interlocking signals, unless permitted by the operator when authorized by the Superintendent Transportation.

1560-A1. Following exceptions authorized for trains and engines not equipped with cab signals:

CT-405 (Special Instruction Governing Operation of Signals and Interlockings)

1616-A1. Employees governed by C.T. 405 must assure themselves that no lever of the interlocking in their charge controlling a switch over which the tubular train equipment is routed, will be operated until they know that the entire train is clear of the involved switch. Where practicable, blocking devices must be used for this purpose.

1663-A. Interlockings Operated Automatically Schuylkill Secondary Track—Creek

When a train is stopped by the interlocking home signal and there is no train approaching on Reading Railroad Company track, and no other cause for detaining train be known, the conductor or engineman shall know that signals are in Stop position on Reading Railroad Company track.

If signals on Reading Railroad Company track are in Stop position, the movement over crossing will be governed as follows:

Conductor or engineman will operate push button and time release marked "PRR" located in shelter box near the crossing in accordance with instructions posted in shelter box.

After interlocking home signal displays an indication to proceed for movement to be made, train may proceed over the crossing.

If the interlocking home signal does not display an indication to proceed after manual operation of signal controls within three (3) minutes, protection will be provided as follows:

Conductor or engineman will report the fact to the Superintendent Transportation and be governed by his instructions.

A reverse movement after a forward movement, or a forward movement after a reverse movement with entire train must not be made over the crossing on main track except on authority of Superintendent Transportation.

When a train or engine is stopped by the interlocking home signal and manual operation as described in shelter box fails to clear fixed signal and means of communication have failed, should no cause for not proceeding over the crossing be known, the conductor or engineman will, after a thorough understanding with each other, provide full protection against trains on the Reading Railroad Company track, pass stop signal and proceed over the crossing.

Track cars must stop at interlocking home signal, then pass Stop signal, proceed to and stop short of the crossing, ascertain that no trains are approaching on Reading Railroad Company track, provide protection, and then proceed over the crossing.

Cars must not be left standing between interlocking home signals.

When a train is delayed within approach limits (approaching distant signals to home signals) on any track, a member of the crew must push the button marked "push when shifting" and hold it pushed for approximately three (3) seconds. When movement of delayed train is resumed, a member of the crew must push the button marked "push when shifting is completed" and hold it pushed for approximately three (3) seconds.

Push buttons are located in boxes marked "PB" adjacent to crossover and turnouts.

1663-A1. South Philadelphia—Pay

When a train is stopped by an interlocking home signal and there is no train approaching on Baltimore and Ohio Railroad Company track, and no other cause for detaining train be known, the conductor or engineman shall know that signals are in Stop position on Baltimore and Ohio Railroad Company track.

If signals on Baltimore and Ohio Railroad Company track are in the Stop position, the movement over the crossing will be governed as follows:

Follow instructions posted in shelter box near crossing.

After interlocking home signal displays an indication to proceed for movement to be made, train may proceed over the crossing.

If the interlocking home signal does not display an indication to proceed after manual operation of signal controls within one (1) minute, protection will be provided as follows:

It must be reported to the yardmaster at the Produce Terminal and should no cause be known for not proceeding over the crossing, the movement will, after a thorough understanding between the conductor and engineman, provide proper protection, and, after protection is provided, the train may pass Stop signal and proceed over the crossing.

The Superintendent Transportation must be advised as promptly as possible.

Cars must not be left standing between interlocking home signals.

Track cars must stop at interlocking home signal, then pass Stop signal, proceed to and stop short of the crossing, ascertain that no trains are approaching on Baltimore and Ohio Railroad Company track, provide protection, and then proceed over the crossing.

Track circuit limits of this interlocking are indicated by a sign on either side of the crossing approximately 300 feet in advance of the interlocking home signal; sign governing PRR movement reads CC in black letters on white background.

Referring to Rule 663

1663-A2. Suburban Station—Westward movements must not start from station tracks when the interlocking signal governing that movement at the westward end of the station platform indicates stop unless authorized verbally by the train director to advance to that signal.

When the engine stands west of that interlocking signal so that the indication cannot be seen by the engineman, the movement must not start westward until a member of the crew personally notifies the engineman the indication of the signal.

Harrisburg—When an engine with or without cars is standing beyond the interlocking signal at end of station tracks, at Harris or State, in such a position that the indication cannot be seen by the engine crew, the engine must not be moved until either the engineman or the fireman has observed the signal or until one of the trainmen has personally notified the engineman or fireman that the signal is in proceed position.
